Keywords: abiotic stress, drought tolerance, physiological traits, plant breeding, SPAD

Author contributions

Conception and design of the study by KA, RG. Material preparation, data collection, and analysis were performed by FLI, ERFV, RG, RB. The first draft of the manuscript was written by FLI and ERFV and the authors commented on previous versions of the manuscript. All authors read and approved the final manuscript.

Acknowledgments

The authors acknowledge the financial support by BMZ/GIZ through a research grant for “Improved potato varieties and water management technologies to enhance water use efficiency, resilience, cost-effectiveness, and productivity of smallholder farms in stress-prone Central Asian environments”. We also thank Jorge Vega and David Saravia for their support during the installation and evaluation of the experiments.
